the  orangery
the integra

Designed for use with a predominately brick perimeter, the system utilises K2's structural aluminium systems to create a very strong yet easy to assemble orangery roof.

The roof, along with the parapet, is supported on the cavity walls and lintels. Replicating the look of a timber flat roof it has a complete "nut and bolt" assembly.

The flat "warm roof" system uses high strength aluminium instead of timber, with insulation and a wide aluminium sectional gutter which replaces traditional flat roof membranes. The roof lantern is manufactured using the K2 aluminium roof and incorporates Celsius glass.

features...

- Fully insulated warm roof construction (100mm insulation) to perimeter gutter
- 400mm integrated aluminium powder coated gutter
- Fully sealed gutter outlets, full range of decorative aluminium hoppers and downpipes
- Deep (580/780mm (D) x 488mm (H)) internal plasterboard soffit
- Structural aluminium framework - no timber

benefits...

- Full one stop solution for brick perimeter orangery roofs
- No problem walking on gutters for maintenance
- Roof specific
- Easy to fit kit, no cutting or drilling of aluminium sections
